Jl. Garu II B, Harjosari I, Kec. Medan Amplas, Kota Medan, Sumatera Utara

I am a fresh graduate in Information Technology with a strong interest and skills in various areas of technology, particularly software development and programming. In addition to my software development skills, I have a basic understanding of photo and video editing, as well as graphic design. I am proficient in using computers for various technical and productivity-related tasks, with a strong ability to learn quickly and adapt to evolving technologies.

Education Level

Universitas Sumatera Utara  - Kota Medan, Sumatera Utara, Indonesia

Aug 2022 - Jun 2026

Bachelor of Information Technology, 3.89/4.00

- Completed undergraduate coursework in Information Technology.
- Independently developed a full-stack web application as a freelance project, handling the entire development process from system design and frontend/backend development to deployment and maintenance.
- Participated in a faculty working unit responsible for documenting various facility activities and events through photography, videography, and related digital media.

Work Experiences

PT. Bahasa Kinerja Utama - Jakarta Timur, Jakarta

Aug 2025 - Dec 2025

Fullstack Developer

PT. Bahasa Kinerja Utama, often called BahasaKita, is a company that provides language, translation, interpolation, and related professional services. The company supports individuals, business, and organizations through professional language solutions tailored to their communication needs.

- Designed the UI/UX of Stethosoul, including Lo-Fi Wireframes, Hi-Fi designs, and Interactive prototypes using Figma.
- Designed and documented system architecture and workflows, including Use Case Scenario, Data Flow Schemas, Data Flow Diagrams (DFD), High-Level Architecture, and Entity Relationship Diagrams (ERD).
- Developed the frontend using Next.js and the backend services using Golang, implementing the application functionality and business logic.
- Developed background workers using Golang to handle asynchronous and background processing, connected through NATS messaging system.
- Designed and implemented data management using MongoDB, including database integration with backend services.
- Integrated the frontend and backend for communication and data flow using RESTful API.
- Developed user authentication and account management features, including registration, login, OTP verification, and password recovery.
- Developed user and admin dashboards to support different application roles and workflows.
- Integrated Midtrans payment gateway to support payment processing within the application.
- Collaborated with a team member throughout the system design, development, integration, and testing process.

Pusat Sistem Informasi Universitas Sumatera Utara - Kota Medan, Sumatera Utara, Indonesia

Jul 2025

Backend Developer

Pusat Sistem Informasi (PSI) Universitas Sumatera Utara is a university IT unit responsible for the planning, development, implementation, and management of information systems and technology services across the university. Develops and support various digital platforms, applications, websites, and IT services to support the academic and administrative activities of USU community

- Developed RESTful API for an incentive submission system for the academic community of Universitas Sumatera Utara.
- Developed backend services using Java with its framework Spring Boot, implementing API endpoints and business logic based on system requirements.
- Designed and managed the MongoDB database to support data storage and API operations.
- Integrated the backend API with MongoDB to enable efficient data management and retrieval.
- Tested and debugged API functionality to ensure reliable system operations and proper data handling.
- Collaborated with other developers according to assigned roles throughout the system development process.

Skills, Achievements & Other Experience

- Projects (2026):** Developed a hybrid deep learning model for detecting and classifying mosquito species using YOLO11 with a ResNet18 backbone. The project involved preparing and managing a mosquito dataset, designing and implementing custom model architecture, training and evaluating the model, and analyzing its performance in classifying three mosquito species: Aedes aegypti, Aedes albopictus, and Culex quinquefasciatus. The model achieved 96.44% accuracy. Developed a Python Flask Web Application to

serve the trained model for image and provide interface for mosquito species detection and classification.

- **Soft Skills:** Problem Solving, Fast Learning, Teamwork & Collaboration, Communication, Project Management, Responsibility
- **Hard Skills:** Golang, Java (Spring Boot), PHP (Laravel), Python, SQL, NoSQL (MongoDB), HTML/CSS, RESTful API Development, Backend Development, Full-Stack Development, Javascript (React), Figma, Database Design, Git.
